KPLAST™ 8381

KPLAST™ 8381 is a moderately tough thermoplastic polyurethane resin for use as an adhesion promoter, mainly in nitrocellulose based gravure inks for flexible packaging. It is often used in conjunction with softer TPU’s to achieve optimum adhesion and flexibility.

10% n-Propyl Acetate  
4% Isopropanol |

**Key Features and Benefits**

- Very good adhesion to polyolefin films
- Good compatibility with N/C, PVB, Ketone and Maleic resins
- Can be used alone or in conjunction with other softer TPU’s or monomeric plasticizers
- Very resistant to oils, fats and water
- Good gloss
- Nitrocellulose compatible

**F.D.A Status**

Although there is no section directly referring to non food contact inks, reference can be made to other sections of the F.D.A. The composition of KP 8381 conforms to the positive list of the American F.D.A. regulations, Chapter 21, Section 175-105 for laminating adhesives, where the ingredients are separated from the food by a functional barrier.

**E.E.C. Status**

The individual monomers used in the manufacture of KP 8381 are listed in the Plastics Directive, Section 1, Part1, ‘Authorized Monomers.’

**REACH Status**

All reactants are REACH pre-registered and as directed to be registered. We have as needed joined the required SIEF’s for the reactant. Our only European representative is Info-Care.

**Additional Data**
