KFILM™ 2071

KFILM™ 2071 is a high molecular weight elastomeric film forming thermoplastic polyurethane.

Product Specifications	
Appearance	Clear
Solids Content	28% ± 2%
Viscosity (25°C)	2000 – 3000 cps
Color (Gardner)	2 Max
Solvent	70% Ethyl Acetate 2% Isopropanol

Key Features and Benefits

- ✓ Excellent lamination bond strengths in adhesive / extrusion laminations
- ✓ Excellent adhesion to various flexible packaging substrates
- ✓ Nitrocellulose compatible
- ✓ Slightly harder than KF 2072

F.D.A Status

Although there is no section directly referring to non food contact inks, reference can be made to other sections of the F.D.A. The composition of KF 2071 conforms to the positive list of the American F.D.A. regulations, Chapter 21, Section 175-105 for laminating adhesives, where the ingredients are separated from the food by a functional barrier.

E.E.C. Status

The individual monomers used in the manufacture of KF 2071 are listed in the Plastics Directive, Section 1, Part1, 'Authorized Monomers.'

REACH Status

All reactants are REACH pre-registered and as directed to be registered. We have as needed joined the required SIEF's for the reactant. Our only European representative is Info-Care.
